PERF○LINE®

PREFACE

Perfotube has been known for many years as a supplier to the interior construction sector. In recent years we have, in addition to manufacturing steel systems, also focused on supplying the so-called slat wall system. As a slat wall specialist we supply interior constructors, developers, interior specialists and furniture manufacturers with MDF slat wall panels. We have in stock MDF slat wall panels in standard sizes and standard colours.

Our Perfoline program consists of four groups of products.

PERF○LINE® STANDARD

Here one can find standard slat wall panels and accessories as they are commonly known.

PERF○LINE® MATT

These products resemble our high gloss chrome plated accessories, except for the matt chrome finish.

PERF○LINE® CLEAR

In this group of products one can find all Acrylic products.

PERF○LINE® SLIM

This is a completely new series which has been developed for a luxurious new slat wall panel. The very thin profile has a visible line of only 4 mm. The accessoiries are available in matt chrome finish. The relative thinness of the accessoiries contributes to an elegant look.

PERF○LINE® LUX

Perfoline Lux is not a slat wall system, but keeps the horizontal profile which allows for inplementation of glass shelves. It is possilbe to (LED) illuminate the glass shelves in the Perfoline Lux profile.

ADVANTAGES:

- The majority of our product supply range is in permanent stock.
- We keep our product range updated and constantly develop new concepts.
- Our advisors are well-trained and help you choose the right presentation system.
- Our facilities in the Far East allow us to guarantee a good price/quality ratio.
- Perfotube is able to produce special designs.
- Perfotube provides its customers with clear and organized documentation.

If you have any questions or remarks regarding this catalogue, the company, our employees or anything else, please contact us.

HMB FINISH

In addition to the Raw MDF panels, our slat wall panels can also be delivered with a HMB finish. This top layer is different from the standard finishes such as melamine and the normal HPL, which are common known in the interior branches. HMB is our development in finishing of panels, for which we have developed special colours and textures. The finish is particularly fast-dyed and has a perfect shine. The HMB finish gives wooden structures a natural looking authenticity. The panels are especially resistant to temperature changes and therefore not susceptible to the condition of the air.

Because we developed the HMB finishing ourselves, we are flexible and we can quickly respond to the wishes of the customers. There are approximately 40 different decors available with this unique quality. For every finishing we have the matching edge banding.

On our colour card one can find a number of possibilities of the HMB finishing. Are you looking for a different colour or finish? There are several possibilities to press the various brands of HPL on the panels. Please ask us for the possibilities.

Minor differences between the original colours and the colours shown here can not be prevented due to technical printing reasons. We can send you a colour sample of the desired finish on your request.

POWER PROFILE

Slat wall power profile. (In combination with our standard slat wall panels only.) Due to their smooth edges, these profiles can spread forces and exceed other profiles in strength. The standard power profile is made from aluminium; optionally, we can provide plastic power profiles in several colours.
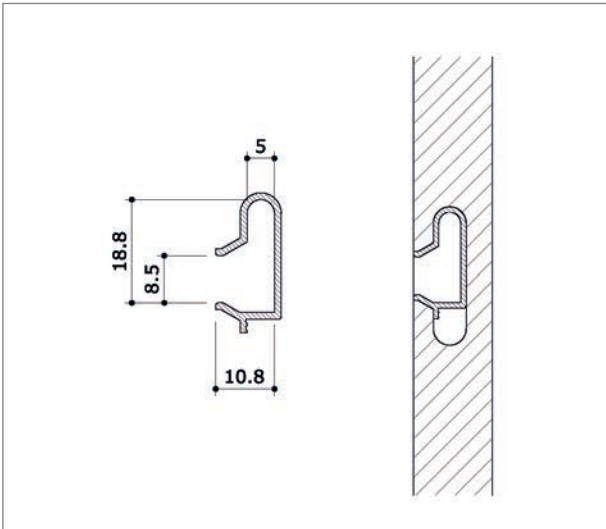

Product Description	**STANDARD PROFILE** For self production of slat wall panels.		
Material	Length	Article	
Raw Aluminum	2400	65.1201.10	
Raw Aluminum	6000	65.1202.10

PERFOLINE SLIM

PERFOLINE SLIM

Our newest series of slat wall panels has a very new sleek profile and give a minimalist impression. Due to an only 4 mm high sightline, these slat walls have got an elegant look. Complemented by a powerful line assortment in two different diameters, Perfoline Slim presents a new dimension of slat walls.

We deliver completely milled panels, with various dimensions, axis sizes and finishes, just as we do in the Perfoline Standard range. Please do not hesitate to contact us about all possibilities of the Perfoline Slim products.

All Slim accessories are provided with a frosted chrome finish. A range of pins with a diameter of 14 mm and a normal hook plate, as well as a series of pins with a diameter of 12 mm with an extra narrow hook plate for an even more subtle appearance are available.

HAND-MADE

The hand-made slat wall panel is developed for the realization of an optimal presentation of heavy products. This unique, hand-made slat wall panel is a high-quality product due to its multi-layer structure.

This multi-layer panel, containing a bonded aluminum profile which was especially developed for this application, ensures an extremely high carrying capacity. The top layer can be provided with any current HMB finishing and therefore it can also be combined with the standard slat wall panels.

Different sheet dimensions, various designs and different profile axis can be delivered quickly due to our ultra-modern machinery. There are almost unlimited possibilities for this high capacity panel. Our standard accessories naturally fit into the hand-made panels.

All sizes are in millimetres
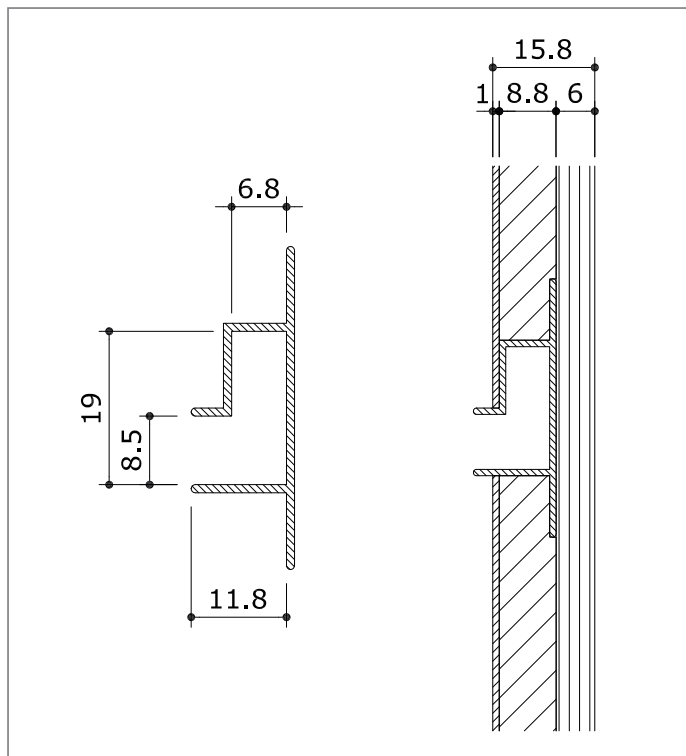

FIRE SHIELDING PANELS

Safety comes first. That is why fire safety is becoming more and more important. Our fire shielding panels are extremely popular. These panels are treated with a fire resistant fluid. This panel can be delivered with any HMB finish. Because of its power profile, this panel can easily be used with our standard accessories. Sizes and prices are available on request. For further information or specifications, please contact us.

All sizes are in millimetres

PRINTING OF PANELS

The printing of panels with, for instance, a visual has become increasingly popular. We are able to print an image on the slat wall panels. This is done digitally, providing you with a wide range of possibilities such as languages and image points in small editions, without time-consuming procedures such as film production set-up costs etc. One can create a specific atmosphere with wall-sized images, which is often more difficult if normal HPL is used.

Panels up to sizes of 1600 x 3200 mm can be printed. Due to a 6 colour printing technique this results in an unparalleled printing quality. All you have to do is to deliver a high-quality digital photo file and we will do the rest for you.

Convince yourself and arrange an appointment for further advice about the many possibilities of printing slat wall panels.

SPECIAL SIZES

The standard slat wall panels are sized 1200 mm wide and 2442 mm high. In these panels the grooves have an axis distance of 101.8 mm.

In order to allow for unique and specific appearance of the wall systems, we can also produce panels of different sizes besides implementation of a panel with special colours or printing of the panels. You have the ability to order higher/lower and/or wider/smaller panels. We also offer the possibility to give your presentation its own appearance by altering the axis distance of the profiles. Do you prefer grooves which are closer together or further apart? There are many possibilities. The number of grooves/trenches can also be altered on request. Our production machinery is capable of milling different axis sizes:

- 76,3 mm
- 88 mm
- 101,8 mm
- 152,6 mm
- 203,5 mm
- 244,2 mm
- 305,3 mm

For further information or specifications, please do not hesitate to contact us.
